A1
found.
an electromagnetic shield provided between said electronic circuitry and said antenna to substantially block electromagnetic radiation generated by said electronic circuitry from reaching said antenna.

A2
10. (Amended) A rearview mirror assembly for a vehicle comprising:

a mirror mounting structure including a mirror housing and adapted to be mounted to the vehicle; and

an antenna for a wireless telephone mounted to said mirror mounting structure, wherein said antenna is coupled to a telephone transceiver mounted in said mirror housing.

11. (Amended) The rearview mirror assembly of claim 3, wherein said antenna is coupled to an audio and data RF transceiver mounted in said mirror housing.

12. (Amended) The rearview mirror assembly of claim 3, wherein said antenna is coupled to a remote keyless entry receiver mounted in said mirror housing.

13. (Amended) The rearview mirror assembly of claim 3, wherein said antenna is coupled to a transmitter mounted in said mirror housing for transmitting garage door opener signals.

14. (Amended) The rearview mirror assembly of claim 3, wherein said antenna is a broadband antenna.

15. (Amended) The rearview mirror assembly of claim 3, wherein said antenna is substantially transparent.

186. (Amended) A rearview assembly for providing an image of a scene to the rear of the driver of a vehicle, said rearview assembly comprising:

a mounting structure adapted for mounting to the vehicle;

a pushbutton mounted on said mounting structure;

3
X a control circuit coupled to said pushbutton for performing a selected function and generating a display signal representing the function to be performed in response to actuation of said pushbutton; and

a display supported by said mounting structure and coupled to said control circuit for displaying the function to be performed by said control circuit a mounting structure adapted for mounting to the vehicle; and

a control circuit coupled to said pushbutton for performing a selected function in response to actuation of said pushbutton, wherein said control circuit is programmable to allow personalization of the selected function that is performed in response to actuation of said pushbutton.
